LUBRICATION SURVEY

An invaluable service provided by trained LE Representatives to existing and potential customers to establish an effective preventive maintenance program.

Managers know that no matter what the age of their equipment, it must operate at peak efficiency. They recognize that the repair - maintenance approach will not meet these requirements. What is needed is a simple yet systematic approach. Maximum productivity is the *goal* and a good preventive maintenance program is the *key* where an in-depth LUBRICATION SURVEY acts as the foundation.

HOW DOES A LUBRICATION SURVEY WORK?

Your LE Representative conducts a complete LE LUBRICATION SURVEY of all equipment that requires lubrication:

- By the area and/or location.
- By equipment name and number.
- By points of lubrication.
- Recommended LE products.
- Application methods.
- Drain or lube intervals.
- Special remarks.

LE's Technical Services Department reviews the survey for accuracy. The material is compiled, and a report is returned with the recommended lubricants for all of your equipment included.

INCREASE YOUR PROFITABILITY

Preventing equipment downtime is directly reflected in increased productivity. A refocus from the repair maintenance philosophy to the preventive approach is needed. Your lubrication requirements should be considered from both a product and service point of view. Your LE Representative is a strong resource who can guide and support you in both of these areas. LE's objective is to increase your profitability.

WHAT ARE THE BENEFITS OF A LUBRICATION SURVEY?

- A key part of a good preventive maintenance program.
- Product consolidation:
 - Reduces inventory requirements
 - Minimizes product misapplication
- Insures that your equipment is properly lubricated.
- Assists your maintenance personnel in seeing that all lubrication points are lubricated as scheduled.
- Reduces downtime and repair parts. Minimizes time spent with OEM manuals researching proper lubricants.
- Easily updated by your LE Representative to keep the survey effective.
- Increases equipment life.
